Infosys Springboard Virtual Internship 6.0 Completion Report

Batch Number: 13 WellBot – AI Based Wellness Assistant

Start date : 02-02-2026

Names:

Prajwal Parmeshwar Patil
Tejal Rathi
J Yuva Naga Meghana
M Abirami
Bhanu Prasad
Sai Jyoshna

Internship Duration: 8 Weeks

1. Project Title

WellBot – AI Based Wellness Assistant

2. Project Objective

WellBot is an AI-based wellness assistant designed to help users monitor and improve their overall health and well-being. The system integrates multiple features such as a chatbot interface, stress level assessment, wellness dashboard, and feedback analytics to provide personalized wellness guidance to users.

The primary goal of the WellBot platform is to assist users in managing their mental and physical health through an interactive and user-friendly digital environment. Users can interact with the AI chatbot to ask questions related to stress management, nutrition, mindfulness, and general wellness. The chatbot processes the user's queries and provides relevant responses to support healthy lifestyle practices.

In addition to chatbot assistance, the system includes a stress tracking module where users answer a set of assessment questions. Based on these responses, the system calculates a stress percentage and classifies the user's stress level into different stages such as red alert, orange alert, okay stage, or green stage. Depending on the result, the system recommends activities such as relaxation techniques, daily routine improvements, or yoga exercises to help maintain mental balance.

The platform also provides a dashboard that visually represents wellness information using cards, charts, and feedback analytics. This allows users to track their wellness progress, view feedback statistics, and understand their overall health status in a simple and organized way.

Overall, WellBot combines artificial intelligence, data analysis, and modern web technologies to create an intelligent wellness support system that promotes healthier lifestyles and improved mental well-being.

4. Timeline Overview

Week	Activities Planned	Activities Completed
Week 1	Requirement gathering, project scope definition, and understanding the problem statement for developing the WellBot wellness assistant	Project requirements were finalized, the scope of the WellBot wellness assistant system was documented, and team roles were assigned for frontend, backend, and dashboard development.
Week 2	Research on AI chatbot technologies, wellness monitoring systems, and selection of suitable development tools and technology stack.	Suitable technologies were shortlisted such as React.js, Tailwind CSS, Python, Flask, and Supabase. The overall system design and development approach were finalized.
Week 3	Database design and setup for storing user information, chatbot interactions, and feedback data.	Database schema was designed and implemented. Backend APIs were connected with the database to store and retrieve user data and feedback.
Week 4	Development of the authentication system including login and sign-up modules	User authentication functionality was implemented and tested successfully for user registration and secure login.
Week 5	The chatbot system was implemented with predefined responses and integrated with the user interface to allow interaction between users and the wellness assistant	The chatbot system was implemented with predefined responses and integrated with the user interface to allow interaction between users and the wellness assistant
Week 6	Development of user interface (dashboard, charts, visualization)	A dashboard prototype was developed with modules such as mindfulness, nutrition, movement, and stress tracking. UI enhancements were implemented to improve user experience.

Week 7	System integration by linking the frontend interface, backend APIs, chatbot module, and database.	System integration by linking the frontend interface, backend APIs, chatbot module, and database.
Week 8	Testing, debugging, documentation preparation, and final system deployment.	Testing, debugging, documentation preparation, and final system deployment.

5a. Key Milestones

Milestone	Description	Date Achieved
Project Kickoff	Defined project objectives, scope, team responsibilities, and success criteria for WellBot.	02 – Feb - 2026
Prototype/First Draft	Developed the initial working prototype covering user authentication, basic chatbot integration, and Flask API routing.	10 - Feb - 2026
Mid-Term Review	Reviewed NLP pipeline progress, refined LLM prompt engineering, and incorporated feedback on UI design.	17 - Feb - 2026
Final Submission	Completed fully functional WellBot system with all features, testing, and documentation submitted.	23 - Feb - 2026
Presentation	Delivered live demonstration covering system architecture, wellness use cases, results, and future roadmap.	28 - Feb - 2026

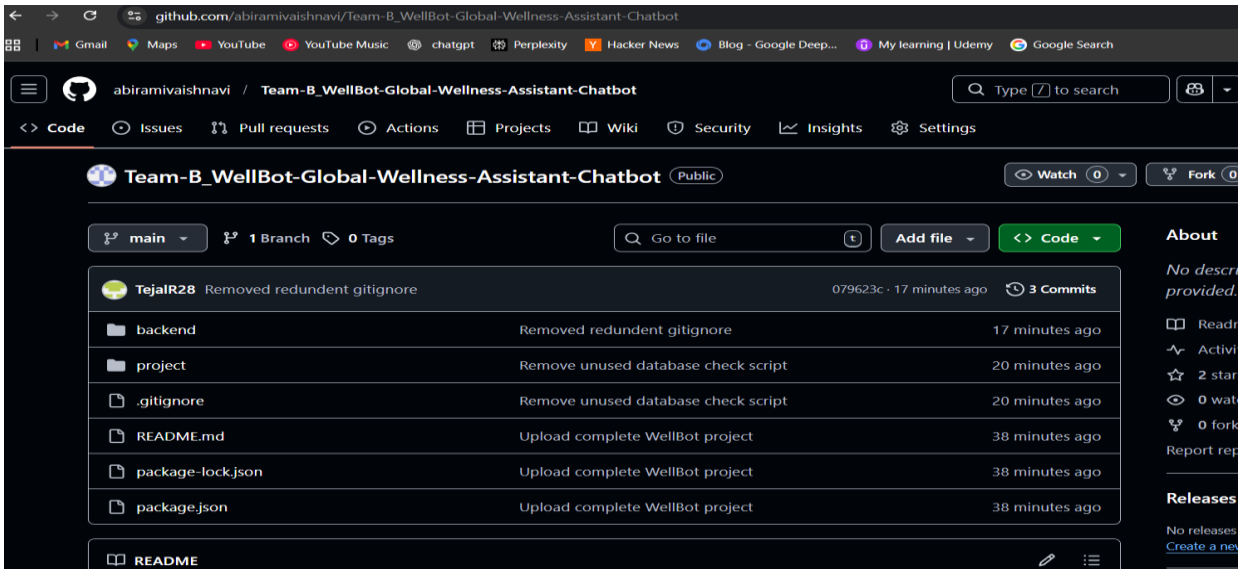
5b. Project execution details

- **Requirement Analysis** – Identified user needs, defined the problem statement, and finalized the objectives of the WellBot wellness assistant system.
- **System Design** – Designed the system architecture, database schema, and UI layout for the landing page, dashboard, chatbot interface, and stress tracker module.

- **Data Collection** – Collected sample wellness queries, feedback data, and questionnaire responses for testing the system.
- **Data Processing** – Organized user input data and questionnaire responses for stress analysis and system processing.
- **Logic Development** – Implemented stress classification logic to calculate stress percentage and categorize stress levels.
- **Frontend Development** – Developed the user interface including the landing page, login system, dashboard, and chatbot interface.
- **Backend Development** – Developed APIs to process user requests, chatbot responses, and stress calculation logic.
- **Testing & Integration** – Conducted testing and integrated frontend, backend, and database components.
- **Deployment & Documentation** – Completed project deployment, prepared documentation, and presented the final system demonstration.
- **Technology Selection** – Selected technologies such as React.js and Tailwind CSS for frontend, Python and Flask for backend, and Supabase/PostgreSQL for database management.

6. Snapshots / Screenshots

Step 1 : Go to Github and clone the Repository in your system then open in VS Code to do the execution , here is the github repo link : https://github.com/abiramivaishnavi/Team-B_WellBot-Global-Wellness-Assistant-Chatbot



Step 2 : Start the with python app.py

```
PS C:\Users\Tejal Rathi\Downloads\frontend-infosys_m\frontend-infosys_m\backend> uvicorn app.main:app --reload

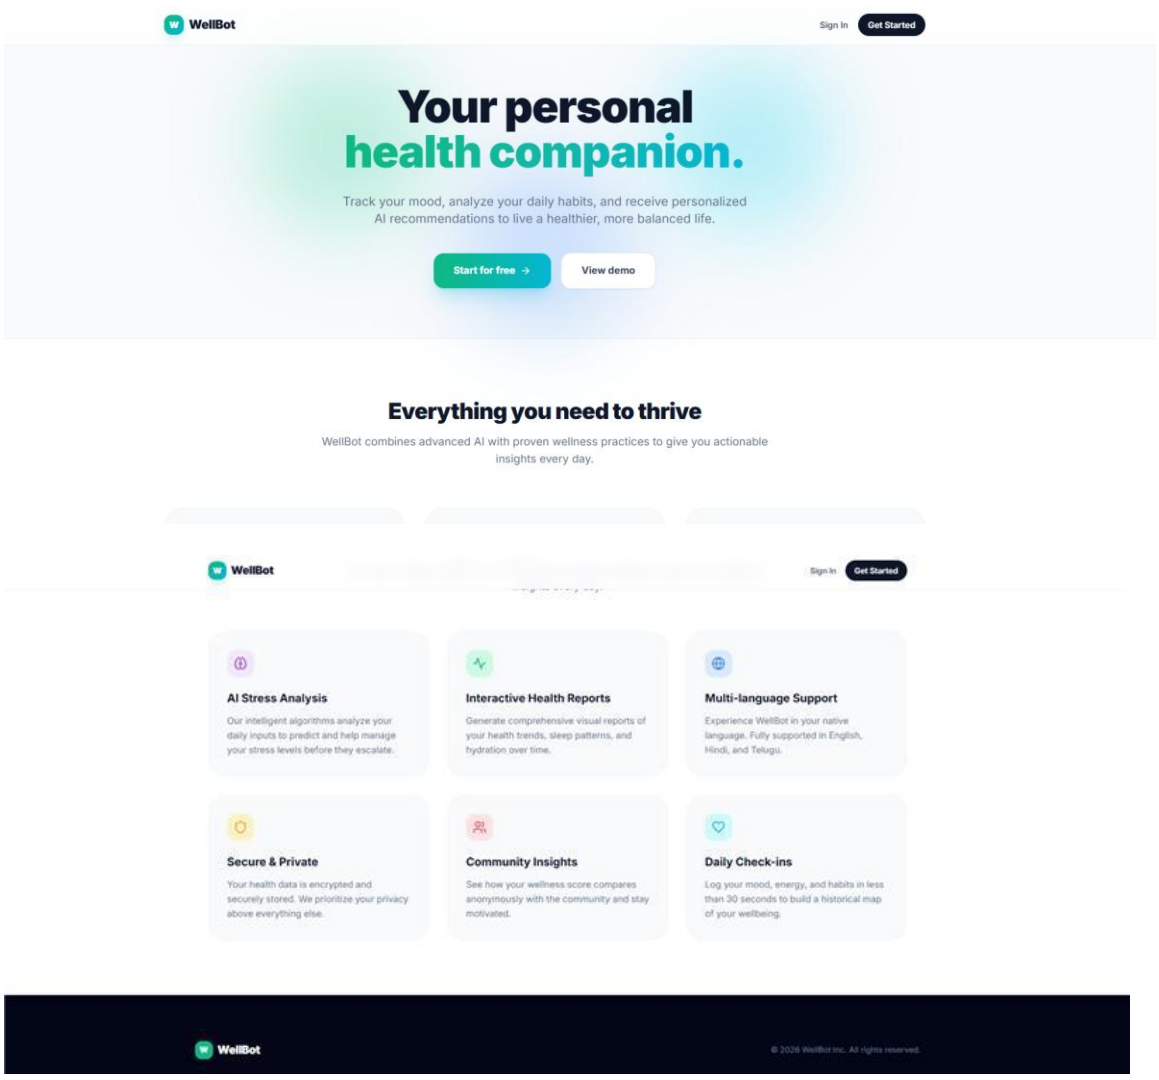
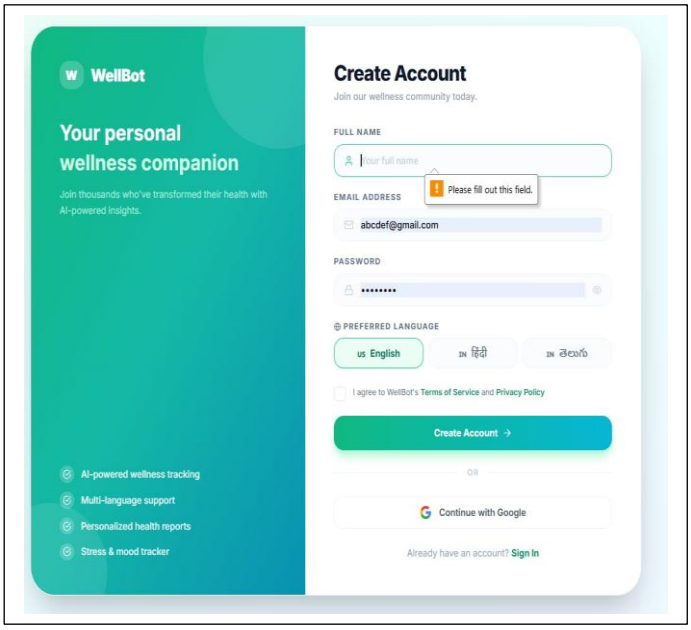
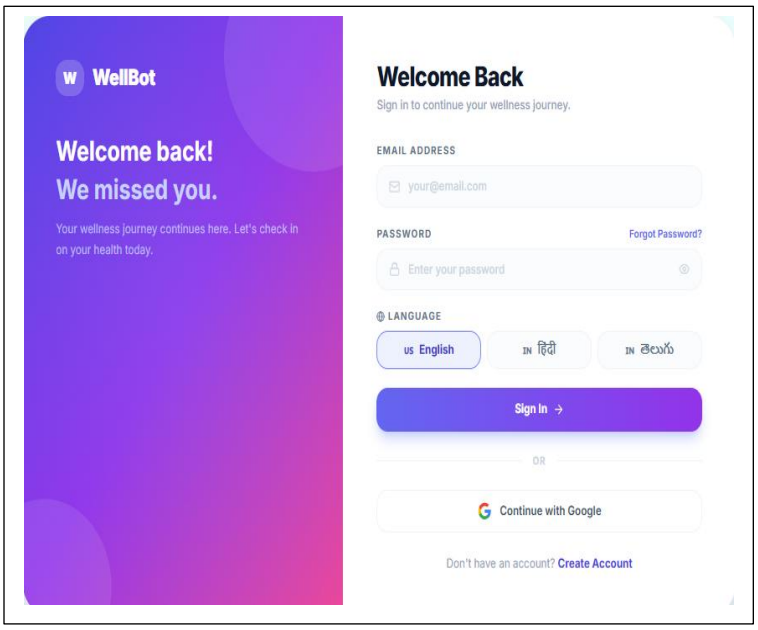
Step 3: Landing page

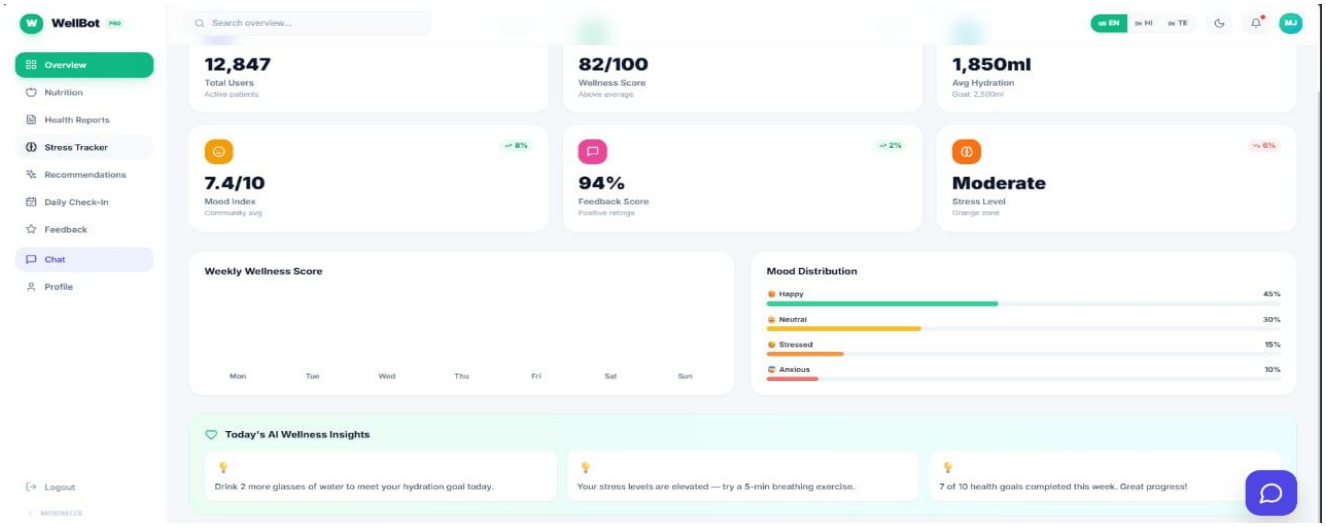


Step 4: After clicking on s here user need to register and log in for Authentication.

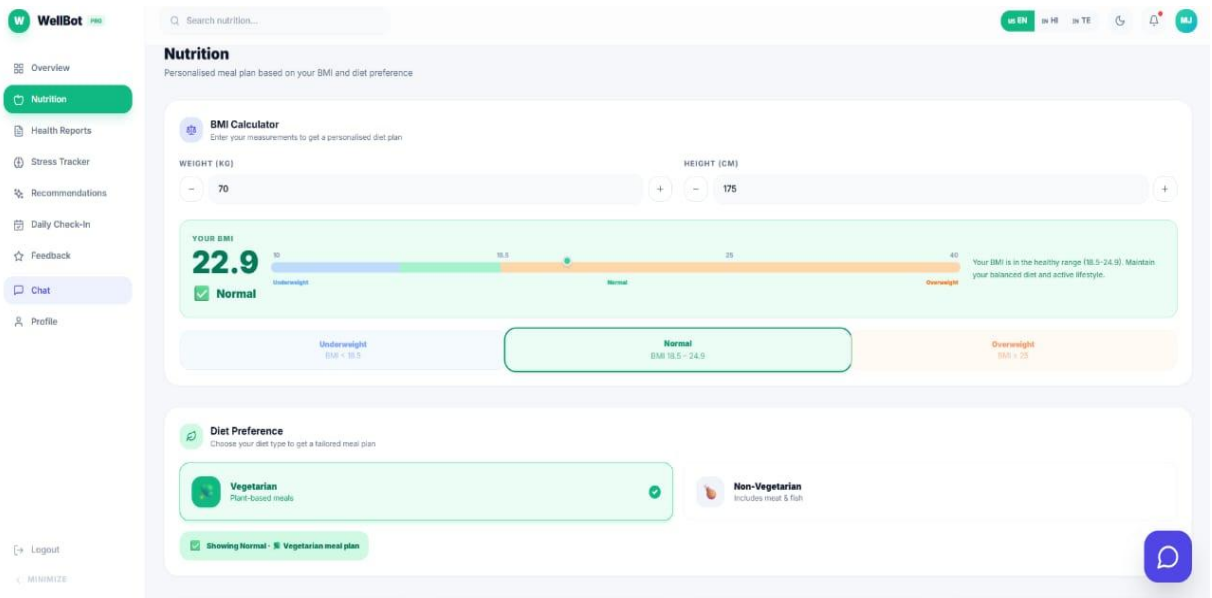




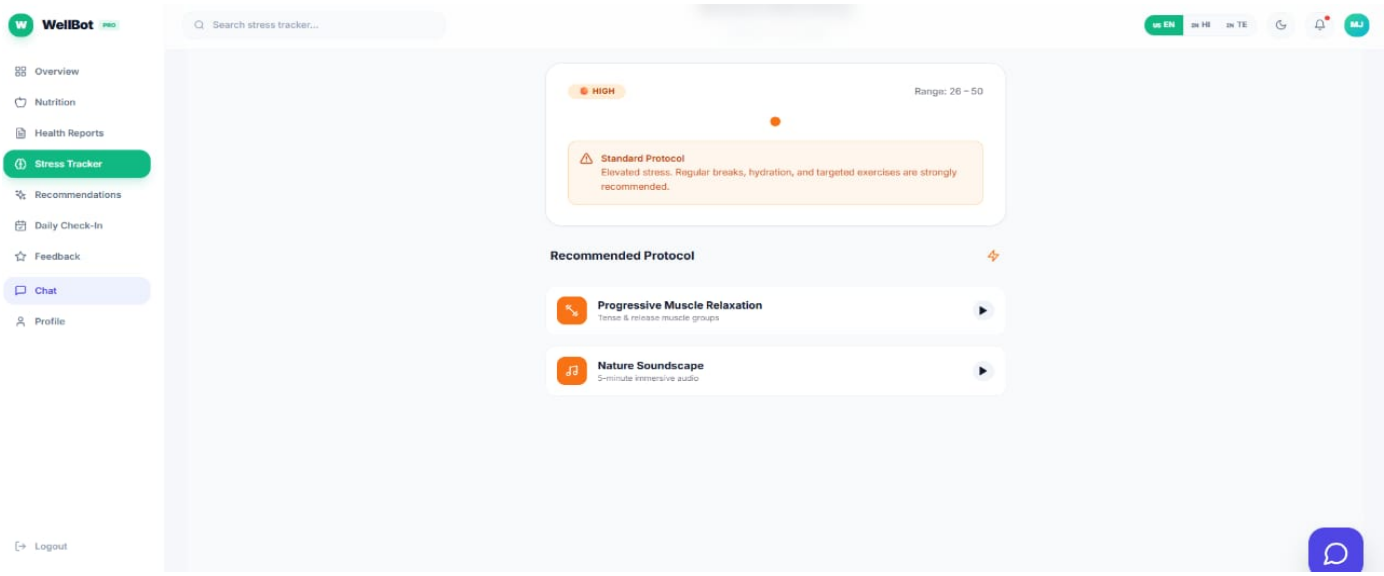
Step 5: Overview Dashboard.



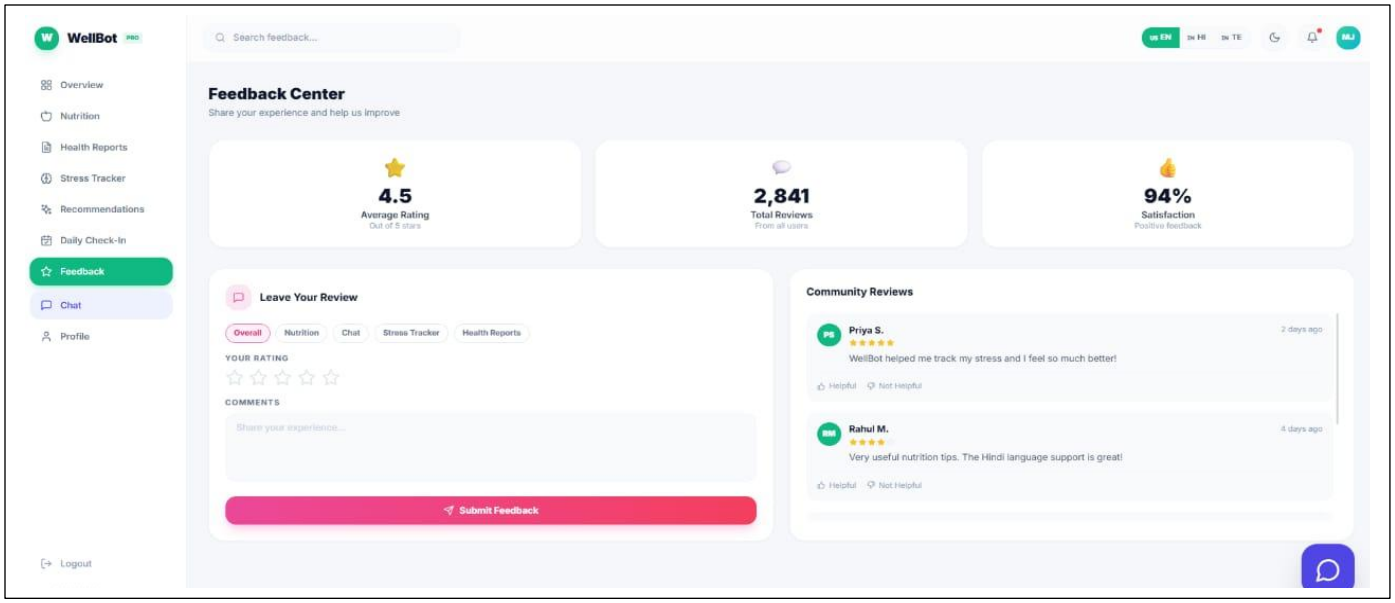
Step 6: Nutrition Page-Displays BMI Analysis and personalized diet recommendation.



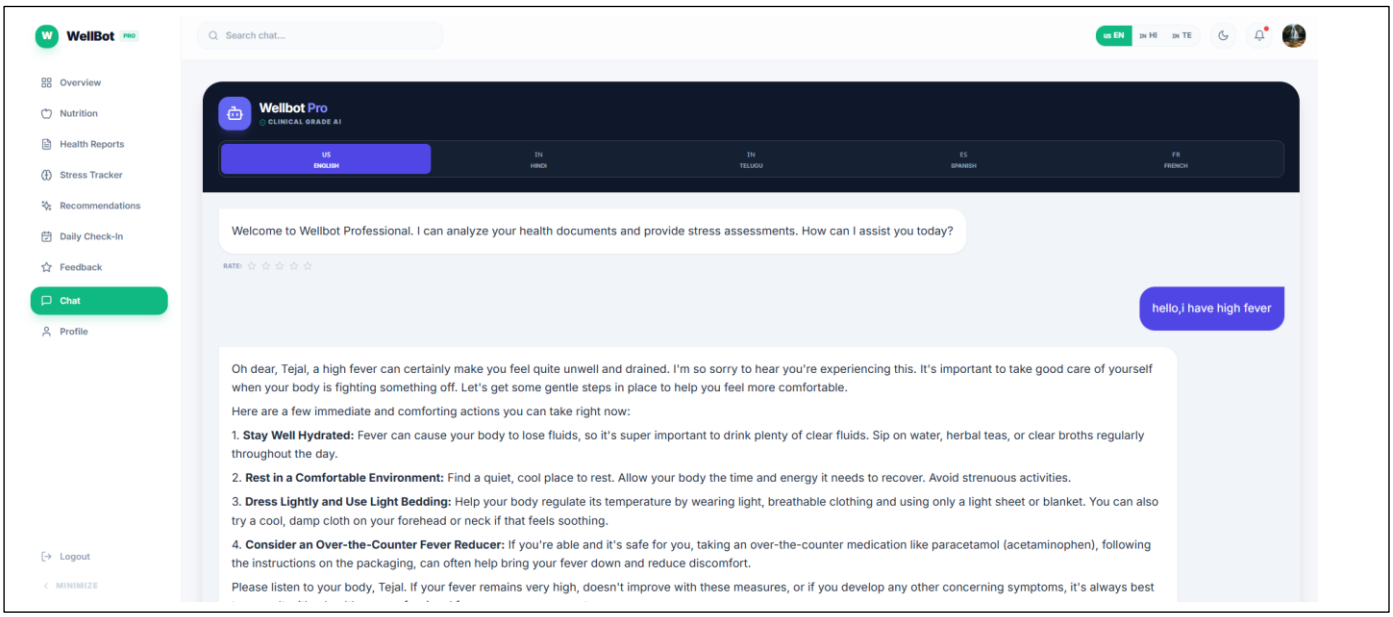
Step 7: Stress level Assessment –Monitors the user's stress level and provides relaxation recommendation



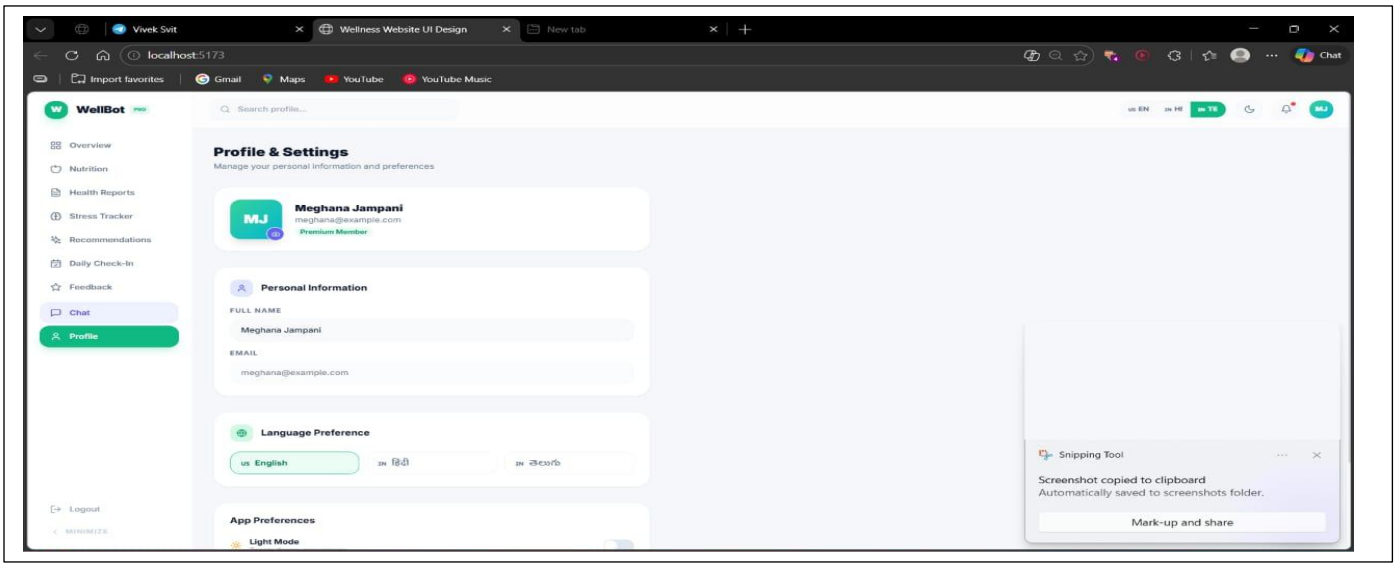
Step 8: Feedback Center -Collects user reviews and displays satisfaction statistics

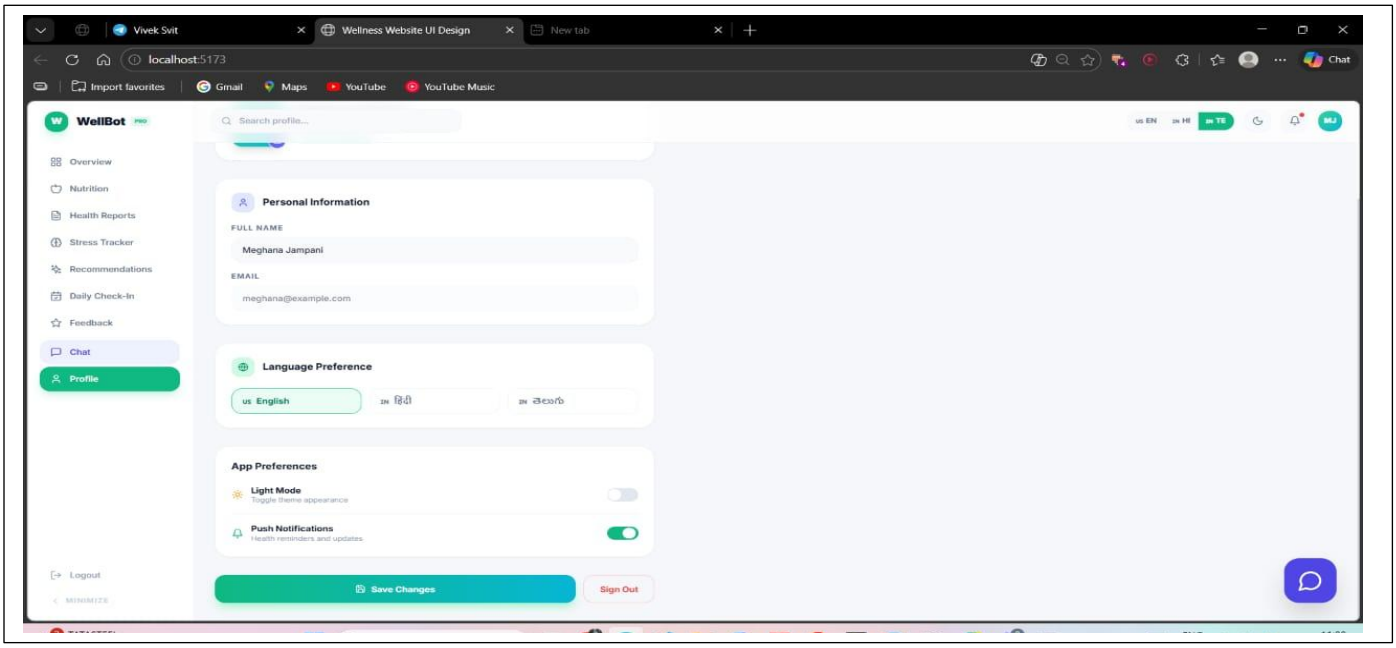


Step 9: AI Chatbot – Allows users to interact with Wellbot for health and wellness support.

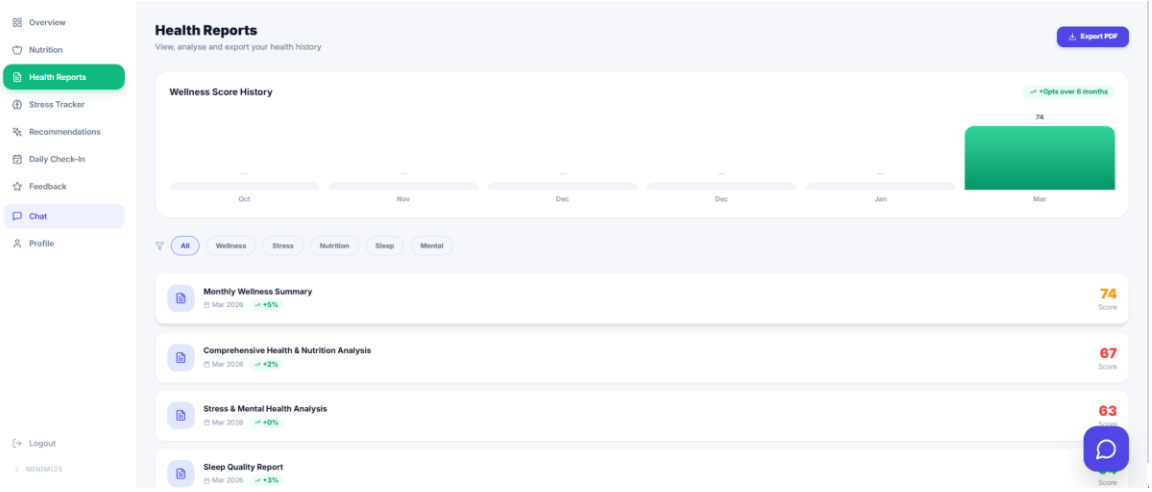


Step 10: Profile & Settings – Allows users to manage personal information, language preference, and application settings.





End : Wellness Score History – Displays the user's wellness progress and health reports over time.



7. Challenges Faced

- **Understanding User Requirements** – Identifying suitable wellness features such as stress tracking, chatbot support, and dashboard analytics required careful planning.
- **Stress Classification Logic** – Designing a meaningful stress assessment model using questionnaire responses and converting them into stress percentages was challenging.
- **Frontend UI Integration** – Integrating multiple modules like dashboard analytics, chatbot, and stress tracker into a clean and user-friendly interface required several design iterations.
- **Chatbot Response Handling** – Ensuring the chatbot provides relevant responses for wellness-related queries required structuring the response database properly.
- **System Integration** – Connecting frontend components with backend APIs and database services needed careful debugging and testing.
- **Time Management** – Completing all modules including dashboard, chatbot, stress tracker, and UI improvements within the internship timeline was challenging.

8. Learnings & Skills Acquired

- **AI Chatbot Development** – Learned how conversational assistants can be built to answer health and wellness related queries.
- **Frontend Development** – Gained hands-on experience in designing responsive user interfaces using React and modern UI frameworks.

- **Backend Integration** – Learned how to connect frontend applications with backend APIs for handling user data and system responses.
- **Dashboard & Data Visualization** – Developed skills in creating dashboards that display feedback metrics, wellness scores, and analytical insights.
- **Problem Solving & Debugging** – Improved debugging skills while integrating multiple system components.
- **Team Collaboration** – Worked collaboratively by dividing roles such as frontend development, backend development, and dashboard implementation.
- **Full-Stack Development Exposure** – Understood how frontend, backend, and database components work together in a real-world application.

9. Testimonials from team

Team Member – Bhanu Prasad:
"Working on WellBot helped me understand the importance of secure authentication systems in AI-powered applications. Implementing login and registration with proper security practices was a valuable learning experience."

Team Member – Prajwal Patil:
"Contributing to the frontend development improved my understanding of responsive UI design and how user interfaces interact with backend APIs in a real-world application."

Team Member – Tejal Rathi:
"Developing the backend and integrating LLM APIs such as OpenAI GPT and Google Gemini gave me deep insight into how conversational AI systems work. Building the full pipeline from database design to response generation was a transformative experience."

Team Member – Meghana Jampani:
"Working on the frontend interface allowed me to improve my skills in UI development and testing. Ensuring a clean and user-friendly interface helped enhance the overall experience of the chatbot."

Team Member – M Sai Jyoshna:
"Preparing documentation and presentation materials helped me understand the importance of clearly communicating technical ideas and project outcomes to different audiences."

Team Member – M Abirami:
"Designing the stress analysis UI and assisting with testing helped me understand how AI systems must be validated to ensure reliable and meaningful responses for users."

10. Conclusion

The WellBot project focused on developing an AI-based wellness assistant that helps users monitor their mental health and access wellness-related guidance. The system integrates key features such as a stress assessment module, chatbot support, and a dashboard that displays feedback and wellness insights. Through the stress tracker, users can evaluate their stress levels using a questionnaire, and the system provides appropriate recommendations to help manage stress effectively.

During the development process, both frontend and backend components were integrated to create a smooth and user-friendly platform. The dashboard was enhanced to display analytics such as user feedback, feedback percentages, and overall wellness indicators. Additionally, the chatbot feature enables users to interact with the system and receive helpful responses related to health and wellness queries.

Overall, the project provided practical experience in designing and implementing a real-world web application that combines AI concepts, data visualization, and modern user interface design. The WellBot system demonstrates how technology can support mental wellness by providing accessible guidance and interactive tools for users.

11. Acknowledgements

Thank the organization, mentor, and any team members who supported your internship journey.

I would like to express my sincere gratitude to **Infosys** for providing me the opportunity to work on **WellBot – AI Based Wellness Assistant** and gain hands-on experience in AI and ML applications.

I am especially thankful to my **Miss Shakthi Gopalakrishnan**, for their constant guidance, support, and valuable insights throughout the internship. Their mentorship helped me overcome challenges and grow both technically and professionally.

I would also like to thank my **team members** for their collaboration, encouragement, and efforts in successfully executing this project. Their teamwork made the internship journey smooth and enriching.

Finally, I appreciate everyone who contributed directly or indirectly to my learning and the completion of this project.
